

Sample Station #1

Midas #3802

NO NAME POND

LEWISTON TWP, ANDROSCOGGIN CO., MAINE

AREA 143 ACRES

OUTLET

NO NAME POND

Lewiston Twp., Androscoggin Co.
U.S.G.S. Lewiston, Me. (7.5')

Fishes

Rainbow smelt	Minnows
Smallmouth bass	Golden shiner
Largemouth bass	White sucker
White perch	Bullhead (hornpout)
Yellow perch	Pumpkinseed sunfish
Chain pickerel	

Physical Characteristics

Area - 143 acres

Maximum depth - 32 feet

Temperatures:

Surface - 79°F

30 feet - 49°F

Principal fisheries: Rainbow smelt, largemouth bass, white perch, and chain pickerel

No Name Pond thermally stratifies during the summer, but a severe oxygen deficiency below the thermocline significantly limits opportunities to manage for coldwater fish. Coldwater fish management is further limited by the presence of competing and predatory warmwater fish. Legal-size trout and salmon are stocked periodically to provide limited coldwater angling opportunities in this metropolitan area. Water quality is more suitable for warmwater fish, which is the primary focus of current management.

White perch are abundant and of rather small size quality. Although smallmouth bass are present they do not appear to be very abundant. Smelt are also not abundant and provide very limited angling opportunities.

Traditional angler access has been permitted over private land owned by the No Name Pond Association. This property is located off No Name Pond Road. A gravel launch provides limited boat access and parking occurs on the road shoulder. Current public access accommodations are tentative and could be terminated in the future. There is a need to acquire permanent public boat access provisions to No Name Pond.
